Contents definition:

Chemistry is one of the basic scientific disciplines that plays a primary role in our understanding of material phenomena and our ability to control them. Solving basic and applied chemical problems is of key and strategic importance for man. As a result of the intensive increase in knowledge, chemistry as a whole has already been divided into several areas in the past.

Biochemistry is a modern, constantly developing interdisciplinary field, the results of which are important not only in the field of chemistry and biology. Since biochemistry is the most rapidly developing part of chemistry and biology today, and the future of technology is generally seen in biotechnology, our economy will be able to absorb an unlimited number of graduates. The development of the department is closely connected with industries that are in the primary sphere of interest of scientific and technical development, such as healthcare, nutrition and biotechnology.
