Contents definition:

In the group of earth sciences, geology provides education with an emphasis on knowledge of the laws of existence and functioning of non-living nature. Geology mainly includes the study of the upper parts of the lithosphere, on which the development of habitats, raw material and economic potential of the country directly depends. At the same time, it is of great importance for understanding the processes of the entire abiotic environmental system. It clarifies the regularities of the structure of the Earth and the Universe through the study of endogenous and exogenous processes. For this, it uses the knowledge of geological sciences (paleontology, mineralogy, petrology, stratigraphy, sedimentology), applied geological sciences (engineering geology, deposit geology, hydrogeology), but also interdisciplinary geological sciences (geochemistry, geophysics) or other natural sciences (mathematics, physics, chemistry and biology).
